Self Help - Video Conferencing

The resources provided in this section are for officially scheduled video conference (VC) courses. Resources for all other Zoom meetings can be found in the Zoom section.

What is a Video Conference Course?

A video conference (VC) course facilitates a live, visual and audio connection between two or more remote campuses allowing students from across the state to access courses not available on their home campuses. VC courses remove physical location barriers, allow for access to expertise and educational collaboration, and open the door to diverse learning perspectives.

Academic Outreach & Innovation collaborates with WSU partners in IT infrastructure and systems support in order to coordinate video conference course operations across the state. Through these efforts connections are scheduled, routed, and monitored for quality and timeliness. This service collaboration enables a standardization of operation, quality and unprecedented access to education.
